Consent

Used UM template. Removed the parts about gender and age, because I am not asking for that anymore.

Consent Form:

By ticking the box, you consent that Niklas Jung, from the School of Business and Economics, University Maastricht, may use the information obtained through this survey for research purposes.

• The data will only be accessed and analyzed by researchers involved in the project.
• The data will be stored in anonymized form on the server of University Maastricht to allow assessment and validation by educational accreditation bodies or research ethics committees.
• Consent is given in the Data Protection Regulation Article 6*, section. 1, point a, see. § 3 and may be revoked at any time by contacting Niklas Jung, cf. Data Protection Regulation Article 7**, section. 3.
• We refer to University Maastricht's data processing policy: https://www.maastrichtuniversity.nl/support/um-employees/you-and-your-work/legislation/privacy-regulations

You may contact Niklas Jung (niklas.jung@maastrichtuniversity.nl), at any time with requests for enforcement of the following rights:
• Right to access: I have the right to gain insight into my personal information processed by the data controller.
• The right to rectification: I have the right to correct my personal information processed by the data controller.
• The right to be forgotten / deleted: I have the right to delete my personal information processed by the data controller.
• Data Portability Right: I have the right to receive my data processed by the data controller in a machine-readable format.
• Right to restrict treatment: I have the right to object and restrict the processing of my personal data processed by the data controller.

If you do not consent and thus do not want to participate, simply indicate it in the following question.

Do you agree to take part in this study?

Yes, I agree to take part

No, I do not want to take part

Automatically ends when pressed no

Instructions

Each of these bold captions are a new page

Welcome

In this study, you will see information about real people who were arrested in Florida (USA) in 2013 or 2014. In legal terms, these people are called **defendants**: people accused of a crime.
For each person, you will predict: **Was this person arrested again within two years?**
The next pages explain the task. Please read them carefully. Afterwards, you will answer three short questions about them.

What does "reoffending" mean?

Reoffending means that the person was **arrested again for a new offense** within two years. The new offense can be a different type of crime than the first one, and it can be minor or serious.
Out of every **100 people** in this data, about **X reoffended** within two years.

The AI model

To help you, you will see the prediction of an **AI model**. The model learned from thousands of earlier cases like these.
The model is right for about **X out of 10** people.
The model also shows a chart that explains its prediction. Here is an example:

- **Red bars**: this information makes reoffending **more likely**.
- **Blue bars**: this information makes reoffending **less likely**.
- **Grey bar (base rate)**: the starting point, a low-risk person (a 31-year-old woman, arrested for a minor offense, with no earlier offenses).
- Longer bars mean a bigger effect.

Words you will see in the profiles:

Charge	The crime the person was accused of when arrested
Felony	A serious crime (in the USA)

Misdemeanor	A less serious crime (in the USA)
Prior count	How many earlier offenses the person has on their record
Days in custody	How many days the person was held in jail after this arrest

How each case works

Each case has three steps:

1. You read the profile and make your **first prediction**.
2. You see the AI model's prediction and its chart.
3. You make your **final prediction**. You can keep or change your first prediction.

You cannot go back to earlier pages.

Feedback: After each case, you will learn whether the person was really arrested again, and whether your first prediction, the AI model's prediction and your final prediction were right.

(only for feedback condition)

Attention: Your predictions can win you €10!

At the end of the study, we draw 5 lucky participants. For each winner, we pick one of their predictions at random. Either first or a final prediction, from any case. Is that prediction correct? Then you win a €10 voucher!

You never know which prediction will be picked, so every single answer counts. Make each prediction your best guess.

Emir, please verify that its correct, and the amount and perhaps what kind of voucher.

Comprehension check

Three short questions

Please answer these questions about the instructions.

1. Out of 100 people in this data, about how many reoffended within two years?

About 10 out of 100

About X out of 100

About 90 out of 100

2. How often is the AI model right on this data?

Always (10 out of 10)

About X out of 10

About 5 out of 10, like guessing

Example chart:

3. Look at the example chart above. What does the person's **age (37)** do to the chance of reoffending?

It makes reoffending more likely

It makes reoffending less likely

It has no effect

The chart does not show this

If they fail any questions, they have to read again and to the questions again. If they fail again, its flagged, but they are not removed.

Instructions (second reading)

SAME INSTRUCTIONS AND COMPREHENSION TEST

Not all of your answers were correct. Please read the instructions again carefully. You will then answer the questions once more.

Welcome

Experiment trials start

Trial T19

Please review the profile and predict whether this defendant reoffended within two years.

Your initial prediction: Do you think this defendant reoffended within 2 years?

Yes, I think this defendant **did** reoffend within 2 years.

No, I think this defendant **did not** reoffend within 2 years.

Your initial prediction: ${q://QID8/ChoiceGroup/SelectedChoices}

Why did the model make this prediction? Red bars increase and blue bars decrease the defendant's chance of reoffending, compared with the reference defendant (grey bar).

Your final prediction: Now, do you think this defendant reoffended within 2 years?

Yes, I think this defendant **did** reoffend within 2 years.

No, I think this defendant **did not** reoffend within 2 years.

Feedback

Trial T04

Defendant profile

Please review the profile and predict whether this defendant reoffended within two years.

Your initial prediction: Do you think this defendant reoffended within 2 years?

Yes, I think this defendant **did** reoffend within 2 years.

No, I think this defendant **did not** reoffend within 2 years.

Defendant profile

Your initial prediction: ${q://QID20/ChoiceGroup/SelectedChoices}

Machine learning prediction

Why did the model make this prediction? Red bars increase and blue bars decrease the defendant's chance of reoffending, compared with the reference defendant (grey bar).

Explanation chart

Your final prediction: Now, do you think this defendant reoffended within 2 years?

Yes, I think this defendant **did** reoffend within 2 years.

No, I think this defendant **did not** reoffend within 2 years.

Pilot evaluation

Trust

I trusted the AI model's predictions.

Strongly disagree	Disagree	Somewhat disagree	Neither agree nor disagree	Somewhat agree	Agree	Strongly agree

Decision aid

The AI model helped me make correct decisions.

Strongly disagree	Disagree	Somewhat disagree	Neither agree nor disagree	Somewhat agree	Agree	Strongly agree

Learning (AI) calibration

Over the cases, I learned when to rely on the AI model and when not to.

Strongly disagree	Disagree	Somewhat disagree	Neither agree nor disagree	Somewhat agree	Agree	Strongly agree

Human learning

Over the cases, I got a better sense of how good my own predictions were.

Strongly disagree	Disagree	Somewhat disagree	Neither agree nor disagree	Somewhat agree	Agree	Strongly agree

----- page break----- ("secondary outcomes" below)

I would support the use of an AI model like this to help judges to make decisions about defendants in my country. implemented (I liked the idea in the meeting)

Strongly disagree	Disagree	Somewhat disagree	Neither agree nor disagree	Somewhat agree	Agree	Strongly agree

This AI model treated all people fairly (racial) bias?

Strongly disagree	Disagree	Somewhat disagree	Neither agree nor disagree	Somewhat agree	Agree	Strongly agree

Was anything unclear or confusing? Do you have any suggestions?
